

2024 WORLD ENVIRONMENTAL & WATER RESOURCES CONGRESS MILWAUKEE, WI | MAY 19 - 22, 2024

MINI SYMPOSIUM ON CLIMATE CHANGE & INFRASTRUCTURE: EMPHASIS ON THE MIDWEST

Sunday, May 19 | 1:30 PM - 6:30 PM
Baird Convention Center, 400 W. Wisconsin Ave., Milwaukee, WI 53203 | Room: S 101 C

Description

The mini-symposium will provide a forum for researchers and practitioners to discuss climate change response, focusing on the Midwest. It will emphasize applications of future climate rainfall data and combined flooding issues driven by Great Lakes water level fluctuation, and also planning and community impact topics specific to the Midwest. The main EWRI Congress will have many papers on climate change impacts on water resources and environmental engineering, but the mini-symposium will offer an opportunity for Midwest participants to get together on Sunday afternoon to exchange ideas.

Divided into 3 panel discussions:

- Development of “actionable” future climate rainfall data, experience from the Midwest
- Examples of Infrastructure Adaptation to Future Climate
- Planning for the Future - Equity in Planning and Climate Migration

Questions?
